

THE SCIENCE OF MOTHER HEALING "Cosmic Regeneration"

by

Han Marie Stiekema

New Wisdom Teacher, "Green Man" & Physician (since 1972)

Text from 1997

Starting point

That morning I felt very light and transparent. I noticed that my bodily energy lifted, starting in my feet, leaving behind no feeling just legs i.e. a trunk of "glass". Ultimately, only a ring of consciousness was left on the crown of my skull. Suddenly and totally unexpected a Lightning1) - "coming out of the blue" - struck the ring and for a split second my entire existence was wiped out. Just Absolute Nothingness i.e. Darkness. Immediately after I was dissolved in limitless and timeless Eternal Light! A Reality a "thousand times" more Real than the common perception. This lasted the whole day. The same night I was drawn into a equally limitless Ocean of Horror. Everything, my thinking, my feelings, my body-mind and my energy had disappeared into it, with only my clear awareness left. For many hours I sat like a Zen monk as the only way to not completely disappear ("die") into the Angst. While my awareness became stronger, the horror slowly subsided. In the morning I knew this was the Underworld from which I just resurrected

Physics 1)

The vacuum arc is a high current, low voltage electrical discharge between two electrodes situated in a vacuum ambient. The vacuum arc is distinguished from other electrical discharges in that the discharge itself creates the plasma medium which conducts its electrical current. Explaining how this self-organization wonder comes about is the objective of this book

Handbook of Vacuum Arc Science. ISBN 0815513755

The Ultimate

After the Lightning had struck me there was a sequence of events. First of all there was Absolute Nothingness2), immediately followed by Eternal Light. Conclusion: Light is born out of Darkness. Both "experiences" exceeded common existence by "a thousand times", hence the inherent absolute knowing that was granted to me. That's why spiritual traditions don't call this an experience, but a "Realization". It subsequently gave me deep insight about the origin, the structure and the dynamics of the Cosmos. The big surprise: it corresponds in detail with the results of current scientific research. Especially, Vacuum physics, Zero point energy and Black Hole theories all confirm my "mystical insight"

Physics 2)

Once our minds accept the mutability of matter and the new idea of the vacuum, we can speculate on the origin of the biggest thing we know - the universe. Maybe the universe itself sprang into existence out of nothingness - a gigantic vacuum fluctuation which we know today as the big bang. Remarkably, the laws of modern physics allow for this possibility. (Pagels, 1982, 247)

Where did all the matter and radiation in the universe come from in the first place? Recent intriguing theoretical research by physicists such as Steven Weinberg of Harvard and Ya. B. Zel'dovich in

Moscow suggest that the universe began as a perfect vacuum and that all the particles of the material world were created from the expansion of space...

Decisive is that the Vacuum is the context of a fluctuating mass (energy), that continuously emerges and disappears from and into that selfsame Vacuum (J.Wheeler)

Because there is such a law like gravity, the universe can and will create itself from nothing (S.Hawking "The Grand Design")

My Physics 2)

What Hawking doesn't say or know.....is that gravity is the centripetal ("death") Cosmic Force of the Vacuum, the latter also called the Cosmic Womb (2010 Han Marie Stiekema)

My Physics 2)

The Vacuum has two different Dimensions. First of all Her Light Body (the Divine, Consciousness) - the relative Vacuum (although in Western religion called "the Absolute".....) - in which energy ("matter") disappears and emerges and the Ultimate Bottomlessness (Absolute Vacuum i.e. Darkness), in which also the former disappears into and emerges from (2010 Han Marie Stiekema)

I'll do my best to describe it as clear as possible. Ultimately, there is the Cosmic Vacuum. This Vacuum includes all that exists. The latter is the content of the former. It thus goes far beyond any imagination. It is a Cosmic Abyss, in which everything continuously disappears, while at the same time being born out of it. This process is parthenogenic, which means that no other principle is involved. The Vacuum is giving birth through a "turning point" - where death changes into birth - in the Depth of its unfathomable Bottomlessness. Its major cosmic forces are centrifugal ("birth") and centripetal

("death")(experienced by me in the Great Horror). Both constitute a Cosmic Balance between creation, destruction and permanence, the former only allowing tiny (but important) fluctuations.

Excursion: Paleo-endocrinology

Is estrogen an evolutionary recent hormone? The opposite appears to be the case. Recently, Thornton could determine with the help of genetics that 450 million years the first and oldest steroid receptor was an estrogen receptor. This primordial mother receptor preceded the androgen receptor, which binds the male hormone, by 50 million years. That Eve originated from Adams' material is thus scientifically highly improbable. To the contrary, Eve's material proves to be (much) older than Adam's (Prof.dr.J.C. Netelenbos)

*There are several Realms coming out of this "Cosmic Womb". They can be best described as emanations. The first Body is the Eternal Light (the Divine, God, BuddhaNature). Its Essence is so subtle - transparent - that it is invisible. However, physics has managed to somehow confirm its existence³). Because "death and rebirth" of the Divine Dimension is taking place in timelessness....Divine Substance disappears into the Womb, while **"at the SAME time"** "an equal amount" is being born..... giving us the impression.....of God Unchanging, of the Absolute. However, not the Divine is Absolute, but the (Non)Reality Beyond - the Cosmic Vacuum - is. "God" proves to be the Son of His (Its) Mother, uninterruptedly renewing "Himself" through Her Bottomlessness*

Physics 3)

The sumtotal of all energy in the universe is zero. (Hawking, 1988, 129)

It is possible to settle the issue by a simple calculation. Astronomers

can measure the masses of galaxies, their average separation, and their speeds of recession. Putting these numbers into a formula yields a quantity which some physicists have interpreted as the total energy of the universe. The answer does indeed come out to be zero within the observational accuracy. The reason for this distinctive result has long been a source of puzzlement to cosmologists. Some have suggested that there is a deep cosmic principle at work which requires the universe to have exactly zero energy. If that is so the cosmos can follow the path of least resistance, coming into existence without requiring any input of matter or energy at all. (Davies, 1983, 31-32)

Because it exists in a vacuum, ZPE (Zero Point Energy) is homogeneous (uniform) and isotropic (identical in all directions) as well as ubiquitous (exists everywhere). In addition, the intensity of the energy at any frequency is proportional to the cube of that frequency. Consequently, the intensity of the energy field increases without limit as the frequency increases resulting in an infinite energy density for the radiation spectrum. With the introduction of the ZPE into the classical electron theory, a vacuum at a temperature of absolute zero is no longer considered empty of all electromagnetic fields. Instead, the vacuum is now considered as filled with randomly fluctuating fields having the ZPE spectrum. (<http://www.zpower.net/zpe.htm>)

A number of physicists (L. de Brogli, M. Planck, Heisenberg a.o.) the Vacuum is considered to be (to give birth to, HMS) Cosmic Intelligence - indeed as the Ultimate Consciousness

Materialization

Crucial for the understanding of life and how it comes into being is the process of materialization: virtual waves, particles, spin. It is about the emerging of "spin" and how these direct our actions. The direction is from "virtual" to the visible world. Physicists tell us the following:

At the base of all and everything is the Vacuum. The content of it is the "Skalar-field" or "Vacuum-potential". It is equal to the above-mentioned "Zero Point Energy", which is ubiquitous. Through import of energy ("spin") the field is producing "probability waves", which are still "virtual". Together they form "interference fields". The potentiality of these electromagnetic waves may fertilize existent matter. It depends on if the latter contain structures that can resonate. If so, the wave collapses in the process, while photons/quanten particles are formed. Virtuality has become reality! It is this way how power/energy is being transmitted all the way from the Origin to materialization (after Dr.U.Warnke)

How this all works in daily life can't be better illustrated but through my own experience. At a particular moment I got the "idea" of starting my work in Japan. (I have lived in Japan for one year). This desire caused a "spin" in the "Vacuum-field" through which "virtual electromagnetic waves" were created. The "spin" gave these waves a certain "direction". Since it came from existing desires (even connected to deep unfulfilled longing) these waves could easily resonate with this my emotional complex. So, they became reality, leading to concrete enthusiasm, ideas, plans and actions.

The night after I got a dream. I was part of a group. The last day there would be an excursion (Japan!). I met a woman whom I didn't know. Just nice, I didn't even know her name. I invited her to go with me. Just before leaving I unexpectedly met B., a girl I was in love with when I was a young boy. She appeared to be blind. We immediately had a deep and enjoyable contact. I explained the situation to the woman and said I felt sorry. Suddenly I saw a house burning, and a child on the upper floor. Little was needed for her to jump, while being safely caught by people on the ground. B. subsequently joyfully showed her new dress to the woman, the latter genuinely admiring it. I had*

found B. and had totally forgotten the day excursion.

** Telling me that I should trust the All-Inclusive Cosmic Womb (Vacuum)*

The energy for the "spin" first came from my ego-desire. The latter alienated me from the Whole, reason for the "Mother" to send me a "corrective" dream. The first woman is my ego-choice (equal to go to Japan). It proved to be superficial. Going to the day excursion with her didn't have real meaning. That changed immediately after I met B. This energy of joy and love re-connected me with the whole of existence, subsequently changing the direction of the "spin". This time the waves originating from it didn't resonate with my unprocessed desires, but with the waves of my entire being. That's why "I forgot everything else". The lesson: the Vacuum doesn't tolerate individual impulses that disturb Cosmic Balance. That why "it sent B. to me" ("spin" caused by the centrifugal Force of the Vacuum, from Eternity aiming at maintaining Wholeness). It made me aware of the value of listening to my deepest intuitions. The function of the Vacuum (Cosmic Mother) is thus to bring you "back home" i.e. to become part of Her Web of Life, once again.

Dreams come out of the "virtual world". Because they originate from a virtual-field, content of the Origin, the Vacuum, (synonymous to C.G.Jung's "collective unconsciousness"), they are also more real. That's why we are able to remember them. The more real the greater the meaning they have to your life. Once understood, we may give our life a totally new direction. Once having received the desire to become whole, this inner force is changing the direction the previously self-centered "spin" i.e. electromagnetic waves. In their turn the latter now start resonating with the ubiquitous field of the Whole of Creation. Through this contact the Whole will reveal to you the specific gap you have to fill in, a space through which you

have to realize your unique contribution to re-creating the world. It immediately brings you back to a recognition of "what to be or/and to do on this earth". This will subsequently materialize in reality. The MotherVacuum not only corrects but also guides! One hour after my dream She "whispered" Her "instructions" for a next step into my innermost Core: to add "Cosmic Mother Cancer Healing" (before never thought of) to my work.....*

** See next chapter "Cosmic Mother Cancer Healing"*

Black Holes

Through the selfsame centrifugal and centripetal cosmic forces the Light - God - "in its turn" is giving birth to the Material Body (emanation) of the Cosmic Womb. First as "morphogenetic fields" (R.Sheldrake) or intertwined invisible quantum energy patterns ("virtual fields"), consisting of highly intensive electromagnetic waves, subsequently manifesting themselves in the visible dynamic interaction of structures and events. Depending on the character of the fluctuations, universes, worlds, the earth, people, the emphasis is either on decay or bloom. Nowadays it is clearly a time of decay. Human accumulations have disturbed Cosmic Balance, therefore it responds with destruction!

It is still unknown, if there is only one universe or several. If the latter is true, then there will be several layers of them, all situated around one or more Black Holes. According to modern research Black Holes are the outcome of the death of a star. From here speculations start. But isn't the central question: why do stars die? Is it simply because their thermal potentiality exhausts? But why is it exhausting? Spiritual Insight about the Great Mother gives the answer. The answer is: because beyond our visible universe there exists a Cosmic Vacuum. It is

this "Womb" - the unity of Darkness and Light (Consciousness) - that draws everything (matter) in, while at the same time shooting energy out. The Holes - as Her manifestations - are a Center of destruction and creation. It sheds a totally new light on what Black Holes really are⁴). Indeed, they are Gates to the Primordial Ground of Regeneration - the UrMutter - relentlessly renewing the universe

Physics 4)

Black Holes "preceded galaxies". * The evidence was unveiled at the 213th American Astronomical Society meeting in Long Beach, California. How incredibly exciting. What was previously known is, that there was a link between the masses of Black Holes and the central "bulges" of stars and gas in galaxies. The news is, that "scientists have been able to measure black-hole and bulge masses in several galaxies seen as they were in the first billion years after the Big Bang (Fabian Walter, Max-Planck Institute for Radio-Astronomy, Bonn, Germany). The conclusion: "The constant ratio may not hold in the early universe", therefore, "Black Holes started growing first". (Dr. Chr.Carilli, US National Radio Astronomy Observatory, Socorro, New Mexico). They are the "channels" along which the centrifugal and centripetal cosmic forces operate! It complies fully with my Threefold Realization (See Starting Point), having granted me insight into the Power of Nothingness uninterruptedly destroying and creating the universe*. I cannot get over it!!! Tears.....

* Breaking BBC news 09.01.2009

In the everyday world, energy is always unalterably fixed; the law of energy conservation is a cornerstone of classical physics. But in the quantum micro-world, energy can appear and disappear out of nowhere in a spontaneous and unpredictable fashion. (Davies, 1983, 162)

The uncertainty principle implies that particles can come into existence for short periods of time even when there is not enough energy to create them. In effect, they are created from uncertainties in energy. One could say that they briefly "borrow" the energy required for their creation, and then, a short time later, they pay the

"debt" back and disappear again. Since these particles do not have a permanent existence, they are called virtual particles. (Morris, 1990, 24)

Even though we can't see them, we know that these virtual particles are "really there" in empty space because they leave a detectable trace of their activities. One effect of virtual photons, for example, is to produce a tiny shift in the energy levels of atoms. They also cause an equally tiny change in the magnetic moment of electrons. These minute but significant alterations have been very accurately measured using spectroscopic techniques. (Davies, 1994, 32)

In modern physics, there is no such thing as "nothing." Even in a perfect vacuum, pairs of virtual particles are constantly being created and destroyed. The existence of these particles is no mathematical fiction. Though they cannot be directly observed, the effects they create are quite real. The assumption that they exist leads to predictions that have been confirmed by experiment to a high degree of accuracy. (Morris, 1990, 25)

Cosmic Regeneration

What has this to do with Cosmic Mother Healing? First of all the "Law of the Universe" - the dynamic balance between death, creation and permanence - can be observed in our daily life. Prominently in nature. The cosmic forces are manifesting themselves in the continuous change of the seasons, in which everything dies and is reborn. The female body is embedded in these cosmic cycles, which is visible through its monthly menstruations. That they are connected with the moon cycle and the tides won't surprise you anymore, for - like many other biological cycles - the Chinese organ clock f.i. - are all expressions of the Womb's cosmic dynamics. The first lesson is to live in harmony with these forces. They guarantee optimal regeneration. Surprising findings come from natural medicine, i.e. the fact that 25% of our bodily cells are in a state of continuous renewal, 50% in a state of "permanence" and

25% in decay and dying. The wonder: the dying cells secrete a hormone ("necro-hormone") that stimulate the growth of new cells. Conclusion: no rebirth without death. Especially fasting therapy takes advantage of this wonderful "gift of the Cosmic Womb"*

** Hence, no similarities with Christian "born again", the latter is a shift in identification only, rather than an ego-death....*

More specifically, "death and rebirth" - the Primordial Cosmic Power - can be applied to the field of spiritual healing, in our case "Mother Healing" or "Cosmic Regeneration". Let me describe the core practice of it. The pre-requisites are the following. First of all the mediator will introduce the Cosmic Mother to the client. He or she will tell the latter about Who She Is, Her Cosmic Powers, how the latter "operate" and the necessity of trust and surrender. The client is asked to visualize the All-Embracing Presence of the Womb, of which all are a part, including the mediator and his or her client. Through this they experience themselves as being in One Divine Space. Additional exercises i.e. suggestions may be given at this stage. The mediator - at least if he or she is an "initiated one" - will spontaneously "rest in the Spirit", which means he or she has shifted from his or her superficial ego to his or her True Self. It is crucial that this Real Self is perceived as Emptiness⁵) (Additionally, the mediator may whisper: "I am Nothingness") and stays where it is i.e. doesn't get lost in feelings, energies etc. If you do, then you are not a pure channel of Mother's Emptiness, which makes your whole healing "effort" a failure right from the start*

** "Nothing IS" means: "Being Nothing, you are everything!"*

Physics 5)

Electromagnetic fields determine the functions of our body.

However, these forces don't exist "on their own". They constitute the content of space and only a little bit of it. We and all other living creatures consist mainly of a Vacuum (99%!). Therefore, it is the Vacuum that is the foundation of life and not matter. Matter provides resonance between the energies, everything in the context of "Emptiness", though. (after Dr. U.Warneke, 1997)

My Physics 5)

Through my Threefold Realization I know that we all live in the All-Including Cosmic Womb or Vacuum. I was thus delighted to find that this is supported by sound scientific theory. My skeptical nature asked for experimental confirmation, though. If we all live in Her SelfSame Space, then "healing on a distance" should be a realistic possibility. So I did the following experiment. One girlfriend of ours has a very big fibroma.

One evening and without her knowing!!! I slipped into Emptiness (a real experience!), subsequently visualizing that she is in the same ("my", our common) Space. Because the fibroma is so big I pleaded to the Mother very intensively, repeating the mantra "Please, Mother remove her fibroma", imagining that the latter was an ugly alien entity. The other day she called me, telling me a strange dream she had that night. "She saw an old ugly crumpled female dwarf in her belly, which frightened her a lot. Her sister heard her screaming and went to her mother (....) for help". But that is not all, after waking up, her otherwise hard and swollen belly had softened considerably and shrunk for at least thirty percent.

The mediator then stretches his or her arm to the clients' body. It may touch the head or the spot where the disorder is felt. Once the contact is established the mediator starts consciously feeling his breathing. The breathing-out is most important. You have to completely let go, in such a way, that it disappears into the nothingness of the pelvis. The secret: the deeper the breathing-out - which you may emphasize a little by holding your breath for a short moment - the more powerful your

breathing-in is. It is a confirmation of how the Womb works! There - deep down in the "turning point" - the more thorough the old dies off, the more powerful the birth of the new! During the expiration the mediator whispers: "Trust the (Cosmic) Mother", while in the inspiration he/she says: "and you will be healed". By doing so the breathing-out and -in make themselves simultaneously felt in the mediators arm, and through it in his touching hand. He/she then visualizes (and feels!) the touching area as a Black Hole.*

What happens is that the healing becomes an exact reflection of the Cosmic Womb and Her Powers⁶). Your inner Emptiness is of the same "substance" as Mother's Void. Her Void breaks down the universe, in order to regenerate it. She therefore is certainly able to clean up your sickness. Her Void contains the field in which "virtual waves" resonate with existing "matter" i.e. the illness. Through your conscious intention to heal, the "spin" of the protons/quanten is changed. Rather than further deterioration, a regeneration process is initiated. But that is not all. Your (the mediators') ("breathing!") arm "runs parallel" to the channel along which Mother's Cosmic Powers - destruction ("centripetal", breathing out) and creation ("centrifugal", breathing in) - run into Her universe and back, making the spot of the disorder similar to a Black Hole, a hotspot of "death and rebirth", of Cosmic Regeneration. Here the "alchemy" of healing - accelerating breakdown of the old, sick, while giving birth to the new and whole - is taking place, a very intensive transformative process, indeed! This is "proven" by the fact, that the hotspot on/in the clients' body is (often) becoming very hot!

** All kinds of other (spontaneous) utterings may be used, as well*

My Physics 6)

Lisa Randall, a physicist from Harvard postulates "a fifth dimension", beyond space and time. Her observations may sound "revolutionary" in the ears of the uninitiated. However, if you only go within "a little", you will discover that Reality is much more spectacular. The entire universe is embedded in a Cosmic Vacuum or Womb. She is the Ultimate Emptiness that is giving birth to several emanations to start with Consciousness (the Divine, the Light), the latter containing "morphogenetic patterns" or the "blueprints of matter". Both the Mother and Her Light Body incessantly permeate all "lower" dimensions e.g. matter, taking care of continuous "birth and death" i.e. regeneration. Her cosmic forces of creation* (centrifugal) and death* (centripetal) are maintaining the gravitational equilibrium, the "balance between the gravitational binding energy and the internal energy opposing gravity" (M.Begelman). Everything "added up" results not in five but in seven dimensions (Womb, the Divine, blueprints, the four dimensions of space and time).....in which Essence and matter are intimately merged (2010 Han Marie Stiekema)

** Kinetic, creation or "birth matter" is centrifugal, vital energy renewing the universe, while "Dark matter" is centripetal, "death matter", i.e. on its way back to the Womb*

By being a reflection of the Cosmic Womb and Her regenerating powers, Mother Healing is unsurpassed. "Heaven" directly bestows its Grace upon you. The healing Source and Her channels pour themselves out to the client without any hindrance. No distractions in the form of religious "creeds", "dogma's" or "convictions" of any kind stand in the way. For the first time in history spirituality i.e. religion and science have fully reconciled. Who the Cosmic Womb is and how She heals has now become transparent. It can be understood through physics, cosmology and related sciences (That doesn't mean that the Cosmic Womb can be fully grasped. Ultimately, She is and will remain a Mystery). By connecting directly to Ultimate Reality the chance of being healed is incomparably higher (than other practices). Both people with a "mystical" inclination and those with a "rational"

mind - and everybody in between - can equally find refuge. Isn't that a miracle? In short, the Mother is Universal to all those who are open and unbiased. This inner attitude is decisive, otherwise no any exchange of energy, grace or salvation can take place. However, in many cases She even heals without any "demands on Her part". For isn't motherly Love unconditional? Joy, gratitude!

Are you interested in bringing the Cosmic Mother to your Community?

NOTES

COSMIC MOTHER CANCER HEALING

A Breakthrough

Han Marie Stiekema
New WisdomTeacher, "Green Man" and Physician
(since 1972)

Origins

Allow me a rhetoric beginning. Physicists tell us, that living beings - including ourselves - consist of 99,99% of a Vacuum. Without space our total mass would be only 20 micro-gram. How is it possible, you would say, that in such a milieu cancer can develop? For that we have to dive deeper in spiritual psychology. First of all: in order to be able to function human beings need to develop an identity. The child is doing this by identifying itself with pleasurable things, while keeping the pain-experiences out. This is the way a "personality" or self-image (plus its shadow part!) originates. In order to make it operable, your inner Core - that what you Really Are - (unconsciously) identifies itself with this your self-image. The result is the ego.

In ancient times life was experienced cyclic. Everything - both the Light and the universe - were born out of the Dark Cosmic Womb, while continuously returning to their Origin. Examples for this were the phases of the moon, the tides, the seasons, day and night and the menstrual period. These processes were ritually supported by "Vegetation Gods" who - by their annual "death" and "resurrection" - guaranteed the continuation of the cycle, good harvests and the wellbeing of the people. Later, Hellenistic Mystery Religions initiated people in a "death and rebirth" experience, thus continuing the old tradition. How this cyclic aspect of life still governs our lives is confirmed by the fate of cells in our body. 25% is in a stage of birth and growth, 50% in a stage of "permanence" and 25% is in decay.

Then Christianity came. In order to distinguish itself from its predecessors - and to emphasize the unicity of its savior Christ - it proclaimed a linear history, at which end the latter would come back to "judge us all". While in the old times countless saviors came and went, the Church managed to bring everybody under its control through proclaiming the Only Begotten Son of God. This had huge

consequences. Before, people didn't fear death. Death was automatically linked to the awareness of rebirth. Once linear time was established, fear of death entered the culture. And with it an excessive emphasis on the ego, as the only entity that could resist it. All Western heroism can be traced back to it. Previously, the Dark Night (Mother) was the Realm of Regeneration, now Darkness became the projection of the fear of death. The Church worsened this by terrorizing the people with fear of Hell. Only Christ could "save you" from it. He, "the Light" - won victory over Darkness....

Ego is fear. Fear is ego. Its cause is the Western inability to go back to the Origin in order to be regenerated. Hence, the former has no choice but blowing itself up. Alienated from its Source it becomes increasingly self-centered, a separate entity that has lost contact with the Whole.....just like a cancer growth. Cancer - spiritually seen - is a metaphor for an alienated ego, an ego that is growing and growing at the expense of all other areas of life. For long it has stopped to be a metaphor, though. Instead, it is a reality of every day life. To be identified with your self (image), running after every thought, emotion and desire, while having lost every contact with your Deeper Self or/and body is the major cause of stress, fatigue and burn-out. This in turn is exhausting your body-mind system, leading to immune-deficiency, which, as we all know is greatly increasing the chance of getting cancer.

The natural state of the self - on the other hand - is that it is part of a greater Whole. It isn't "autonomous" like "modern" psychology wants us believe. Actually, our spirit is embedded in Heaven, our body is part of the earth and our "soul" (psyche) is interwoven with the community. Still, the "ideal" of an "independent" ego dominates established scientific disciplines. They consider the natural regeneration of the ego by its greater context a "regression", something that - they say - proves the "immaturity" of the person involved.... So, science is continuing the policies of estrangement, once begun by the Church. There is one area, that they cannot

manipulate, though. It is our daily sleep. (However, some still call it a "regression"). To all other sound thinking people the night brings regeneration to the ego. In the morning you feel refreshed, alive and renewed. Like in ancient times, in which people trustfully surrendered to the Dark Mother! On the other hand, people who suffer from chronic insomnia are easily prone to immune- deficiency i.e. vulnerable to cancer

The fear the ego has of death (Nothingness, Darkness) is the deepest fear possible. It is existential. This fear cannot easily be "solved" by good sleep only. It is synonymous with the fear of decay and destruction. Every "fiber" of our system resists it. It totally ignores the fact, that life is a (dynamic) balance between "destruction" and "creation". For example, in the example mentioned above, dying cells are secreting a substance ("necro-hormone", prof.dr.W.Zabel) that is promoting the birth of new cells. If decaying cells are artificially kept alive (through bad food, overeating, lack of exercise, impaired elimination, antibiotics) no hormone will be released, blocking rejuvenation. The balance, which should be dynamic and flexible, hampers. The death pole is gaining territory at the expense of the life pole. Toxic waste products are accumulating. Now the causes for this are manifold nowadays. It ranges from spiritual to psychological, physical, social and ecological. In the spiritual realm for example we have lost awareness of the destructive aspect of the Divine. With the re-emerging of the Great Cosmic Mother this is changing right now. We come to understand that destruction of everything old, sick, ugly, evil, self-centered and accumulated is a pre-requisite for birth of the new, fresh, young, healthy and whole...That's why "going back to the (Mother)Source" is the prime spiritual foundation of all cancer healing....

Cosmic Mother Cancer Healing

How does the practice look like? Actually, there are many possibilities. I will try to put them in a logical sequence. First of all, nothing goes without trust in the Mother. So, you should read about Her, waiting for the moment, that you acknowledge Her Reality, together with Her limitless Healing Power, based on Her Cosmic Forces of Destruction and Creation. This trust should be actualized by feeling and watching Her all-inclusive Presence. This means that you are aware of being in Her Space, if possible "24 hours" a day. It is the foundation upon which you feel absolutely secure, your existential fear slowly subsiding. What helps is first of all feeling your skin in contact with your clothes. Once established, you will experience the surrounding space as an extension of your body-skin awareness. You may realize that the Cosmic Womb surrounds you uninterruptedly. In fact, you have been born INTO Her Womb, not out of it. It is a blow to our life-long idea of being "independent". A good laugh wouldn't be bad at such a moment....

Based upon this you may do the recommendations I have given to you in the first part: "Science of Mother Healing".

The third grand approach is done while laying in the bed before going to sleep. The room should be as dark as possible. First you do some body-awareness like feeling your "spine breathing out and in". Once established, you realize the Power of the Vacuum and Her ability to take "everything back". Remember that this is a Cosmic Force, that is always there. Then you may feel the place of the tumor, together with all (confusing) thoughts and emotions: fear, pain, remorse, guilt, self-pity etc. You consciously accept them, feel them and acknowledge them as being part of you. Preferably during every breathing out (disappearing into Her Darkness) you plea to the Mother that She will take everything back into Her Bottomlessness. You vividly visualize the tumor disappearing in Her Abyss, the

former being destroyed, or shrinking, anything, while remaining the inner observer to the process. You may accompany this through whispering the mantra "death" (during breathing out) and "rebirth" (during breathing in). The more you let go, the more your breathing in will give you renewal, freshness, relief.....You may respond with gratefulness, prayer, a song....

In between simple cries for help will contribute a great deal to your healing process. Actually, you are constantly dying and being reborn. Birth isn't a one moment event in time, but an ongoing process. For example, the Emptiness of the Mother takes care of renewing your mucous membrane of stomach and bowel every 5 days. An important part of your liver is changing its cells every 6 weeks. Fat tissue every 3 weeks, skin cells every month, after a couple of months you have completely new bones, the same is the case with red blood cells. With other words we never cease to be a child of the Cosmic Mother. (Here again the denial of regular psychology. They have a very reductionist view of reality, while trying to impose this on people. If this is the case with you, distance yourself from it). My advice, take reality seriously and be a child of the Mother. Surrender to Her like a child does, let your ego cry for help, while simultaneously watching it! In this way you let go, while remaining (in) your inner Center. (The latter psychology also has never heard of). Your periphery is very emotional, while your Center remains "cool".

The third major approach is the following. It is based on a phenomenon called resonance. In "The Science of Mother Healing" I have elaborated on the "virtual fields" that originate from Mother's Emptiness (Science: "Cosmic Vacuum"). These fields are only transferring their full power if they resonate with already existing waves and structures. Now, in case of a tumor the oscillations (vibrations) of the tissue are notoriously low. This is manifested by its solidity. It means that the subtle energies of the "virtual field" often have difficulties in having an impact on the cancer. The solution is the two ways approach. While the healer is in Emptiness, "inviting

the Mother" to take care of your tumor, you should SIMULTANEOUSLY make contact with the tumor from within (only you can do that), consciously (through inner Emptiness) feeling the area where the tumor is. Additionally, you start visualizing light or heat in and around the cancer. Sometimes you feel it, becoming more light, alive, sometimes not. It doesn't matter. Whatever you feel, you do the exercise. By doing so, the energy of the tumor-vibrations intensifies, becoming more and more receptive for the healing waves of the Mother-field. Once the resonance sets in, the Mother will start Her breaking down process.

The Psychological Dimension

*Existential fear is the drive behind identification. There are two possibilities in this case. Either you build "a strong personality" or the opposite: you constantly collapse. The latter is the more "modern" variety, in which a "weak ego" dominates the spectrum. In both cases one particular pattern - or subpersonality - dominates all the others. An example of the former is a "workaholic", a manager type sacrificing his life in favor of management, effectiveness and (self) control. Everybody who is addicted to thinking, concepts and convictions - scientific e.g. religious addicts - could also be classified under this chapter. While the latter could be a part-time working fun type, exclusively obsessed with consumption, superficiality, maybe addicted to drugs, as well. What both have in common is a very limited inner flexibility. It is a fixed pattern not only dominating their minds, but also every individual cell! ("Your mind is in your cells"). Cell metabolism - especially when suffering for decades from this fixed mode - has become (very) one-sided, eventually leading to all kinds of dis-functions. Sooner or later this will lead to chronic disorder, among them the possibility of cancer.**

** It is remarkable, that actors and actresses, who are used to playing many different roles, usually are less sick and live longer!*

Suppressing vital functions also leads to a permanent elevated stress level. This has its effects on bodily functions, as well. Through it the sympatic nervous system is constantly overstimulated. This eventually leads to fatigue and exhaustion on the one hand (depression) and blockage of the parasympatic nervous system (the other "half" of the autonomous nervous system) on the other. The latter's function being breakdown, detox and elimination of toxic waste products. The result: the body cannot get rid of its waste. What you get in the end is an immune-deficiency on the one hand (f.i. permanent too low levels of adrenaline and other hormones) and an accumulation of harmful substances on the other. Ironically, on this level there is a repetition of what we have seen in the previous: an impairment of the destruction side of life....The paradox: only if destruction is working well, you will live. If, on the other hand you suppress it, then you "will die!" The possible effects are a.o. early aging, dementia, chronic disorders and cancer.

First concern is to change the conditioning of the ego. Traditionally, the West is doing this through a "re-education" program. But who is re-programming whom here? Right, it is the ego trying to change itself. Through relaxation, exercise, talks, role-play, behaviorist techniques, discipline.....It implies ego-effort. Ego cannot cure itself, though. It is the problem, not the solution. That's why these programs are often due to fail. The problem is the paradigm of the ego as the "center of personality". Through the influence of Oriental philosophy (Buddhism) we know this isn't the case. It is not your Core, but a bundle of functions, designed to survive in daily life. Who or what you Really Are has been frenetically suppressed by the Church for 2000 years. The irony is, that we in the West "know everything" except ourselves. Why? Because, deep within we are Divine. Deep within we are utterly free, in a glorious way connected to the Eternal Light, full of joy, wisdom, compassion and strength. No need for the "guidance" of priests and ministers, anymore. The Divine being thus the greatest threat to the Church!!! Therefore, the latter did (does!) everything to keep you away from the Alive God..... while*

entertaining you with secondary issues, only.

** The exact definition: the bundle of functions is called the "small self", the erroneous assumption that this is the center of personality makes it the "ego"*

Because I have written extensively about it*, here a summary of the psychological aspect of Cosmic Mother Cancer Healing. It will be clear that without the spiritual dimension no true solution can be found. In practice, it means to step back within. (In Dutch: "erachter komen"). This you do by closing your eyes, while watching the inside of your eyelids. Through progressive relaxation all kinds of thoughts, images and emotions appear on the screen. The discovery: You consist of watching and the watched. Conclusion: I am "here" (my watching) and my thinking is "there" (in front of you). Thus....I am NOT my thinking, problems and conditionings!** As the Space of your watching grows, hitherto suppressed parts of your psyche also start coming to the surface. Your experiences become more vivid. More and more you discover things of yourself you never had dreamt of. It means that instead of being fixed on a (very) limited number of "subpersonalities" you dispose of a much greater variety of them. Each of them "sharing" its specific energy with you. This can be intensified through "evolutionary exercises". By identifying with a lion, gorilla or crocodile you benefit from their healing energies. This is exactly what you see in cancer patients. After having been diagnosed, many start doing exactly those things (boxing, mountain hikes, flamenco dance) they always had suppressed*.

** Including integrating "negativity!". I have described the details in my chapter about "Emotional Self-Integration" (ESI) (Book "Origin" 3).*

*** Later, when your watching extends and becomes your inner Space, the opposite takes place. You are Space and your thinking, emotions and desires appear to be the content of it!*

Now that you have the disposal of a New Center (your watching, your True Self, ultimately your Divine Spark) on the one hand and a broad

spectrum of possibilities, on the other, the flow of energy from the Source into your body-mind system is abundant. It is often felt as an invitation to (also) go into practices/experiences that require effort! So, many start hiking, others follow a course in self-defense, quite a lot go into creativity and the arts or accept another challenge. This time, contrary to the ego - the lame duck of the previous phase - discipline goes without effort. Without much doing on your part you establish inner balance, rather than being caught by extremes, like you were before you started your healing. Many, for the first time, discover true priorities in life. Getting rid of trivialities is a liberation in itself. Moreover, once the contact with the Source is restored, you may become a shining Light to others. That, at last, is my passionate prayer for all of you.

The Physical Dynamics

Spiritual ignorance and existential fear, together with an alienated and blown-up ego, as well as fixation on a few aspects of life, only, all consequences of 2000 years of Christian civilization....have created a theater in which harmful physical influences thrive. The common denominator is immune-deficiency on the one hand and the accumulation of toxic waste on the other. Four more factors have to be mentioned here. They are 1. lifestyle 2. self-poisoning through one's own bowel 3. environmental toxins (including medication) and 4. the ubiquitous electro-magnetic radiation. All these factors are interacting with each other, explaining the explosive character of cancer nowadays. I have called this MESS or Multiple Etiological SumTotal Syndrome.* It says that cancer (or any other chronic disease) doesn't have "a single cause". That's why "scientific efforts" to find them are always in vain. It is self-serving, benefiting research and future profits, only. In the mean time false hope is created. No, this is not the road (wo)mankind should go. Let me inform you about the alternatives.

** Who helps me with translating the MESS article from Dutch into English and German?*

Above mentioned factors, together with genetic and constitutional causes, completed by so-called "foci" - chronic inflammations (tonsils, teeth and others) - that have a negative effect on other organs, constitute the SumTotal of causes (Dr. J.Issels). This "pool" uninterruptedly disrupt basic regulations i.e. the "Grundsubstanz" ("Matrix") in the entire body. It does so through toxic, allergic, nervous and hormonal mechanisms. The effects are manifold. First of all the autonomous nervous system is effected. It ranges from centers in the brain, fixation of the sympathetic (or vagus) to hormonal glands. Secondly, the immune-system starts suffering, especially the RES (reticulo-endothelial system with its immune cells), the lymph-system, bowel and liver functions. At last enzyme and redox (oxydation) functions within the cell are damaged. The result is a unbalance on all levels: from acidification to failure of enzyme-reactions, from accumulation of waste to immune-deficiency, from failing regulations to electrical depolarization of cells (through electro-stress). Leading to a tumor friendly milieu on the one hand and a lowering of the resistance on the other. It is in this internal milieu, that tumor growth is facilitated. Little - fatigue, flu, antibiotics, excessive meal, too much coffee - is then needed to actually have the first DNA derail, producing the first cancer cells. Generally (there are exceptions) no tumor without a tumor-friendly environment (first)!

A fatal combination: electro-magnetic radiation (Handy's, Wifi, Dect-Telephones, Computer) damaging the cell-membrane and other cell-structures (including DNA), paving the way for toxins (environmental pollution) to come in and damaging the DNA even further, leading to cancer-mutations. A cancer cell has been born. Some decades ago cancer was still an "individual" disease, strongly linked to ageing. Nowadays, it has become an epidemic, increasingly including children, young people and adults. While

health care is still treating individual cases, only, assuming individual causes, the overall picture has changed dramatically. CANCER HAS BECOME AN EPIDEMIC DISEASE affecting everyone. Although lifestyle and genetic causes certainly play a role, it is the EMR and the toxic environment that are responsible for the global spread of CANCER-EPIDEMICS (50% in Japan, 45% in Germany, 50% in China, 30% in the Netherlands). We are committing a collective suicide!

Cure of cancer isn't just taking the tumor out. Although this can be a (very) useful measure, indeed. It means to simultaneously getting your entire body-mind system in order. To clean up the tumor-milieu is where it is all about, this to prevent future tumors! This, however, has implications, not only for the person in question, but for society as a whole. The former has to thoroughly change his or her lifestyle, while society has to aggressively tackle the problems of environmental pollution and the electro-disaster. Not to speak of changing the goals of the culture as a whole. As long as materialism remains the highest goal, causing the rat race with its "progress", greed for more (and more), exploitation of people(s) and the earth, the resulting stress, psychological disorders, the impact on relations and education, eventually leading to burn-out of both individuals and society as a whole....cancer will never disappear. On the contrary: it will become explosive.

So, if cancer is a symptom of a sick civilization, what can you do personally? Experience has taught me, that the greatest chance to be healed is to do ALL above mentioned recommendations SIMULTANEOUSLY. Thus, seek refuge in the Cosmic Mother, find out Who (What) "She" is and establish a relationship with Her. Become convinced of Her Healing Powers and entrust yourself to them. Secondly, start doing additional emotional (psychological) integration. Thirdly, tackle major problems on the physical level. This consists of 1. Have a check for "foci". One technique is the computerized Thermo-Regulation. If "foci" are found, f.i. in the

dental area, let these teeth treated. 2. Change your lifestyle, including an optimal diet, bowel cleansing and other measures. I have especially designed the "Personal Health Plan" for this (always consult your physician!) 3. Remove all damaging electro-stress from your home, everything that is wireless (Wifi), for example Dect-telephones. Ask your neighbors to also remove Dect-telephones (their range can be 90 meters), (very) limited use of cellular, computer and TV 4. Remove all poisons from your household, especially chemical detergents.

Last but not least I have to tell you, that I DON'T have a cancer clinic (anymore). This to prevent disappointment. So, you can't get a cancer treatment here. What we do though is:

1. Cosmic Mother Cancer Healing (the spiritual part), both personal and "on a distance" (Send your photo and diagnosis to me and I will send Mother's Healing Power to you on a daily basis)

2. MeiMei, my wife, therapist TCM from Beijing, China guides you in starting, developing and maintaining a healthy lifestyle on the basis of the "Personal Health Plan" (See: www.vitalworld.org)

3. MeiMei is a Master of Chinese Guasha Therapy, one of the most effective approaches for boosting your immune-system (Regeneration), while simultaneously detoxifying and de-acidifying your body. (See: www.meihan-guasha.nl)

All the best, good luck, Mother's Blessings,

Han Marie Stiekema
